Electronic Fly Swatter

Catch flying and sitting insects!

Flies and mosquitoes are a nuisance to you? Using the Gardigo Electronic Fly Swatter, you can kill pesky flying insects without causing them pain. Striking them with a traditional fly swatter often leaves unsightly marks on the walls. The Gardigo Electronic Fly Swatter is not designed to squash flies and mosquitoes to death. Instead, it kills them using high voltage, keeping your wall papers clean. Setting up the device is quick and easy to do: Open the battery compartment to insert two 1.5 V AA batteries. Pushing the red button on the handle activates the high voltage grid, as indicated by the red LED. Now you can try hitting flies or mosquitoes with the swatter. The Gardigo Electronic Fly Swatter works for flying insects as well as sitting ones.

Caution! Do not touch the grid during operation! The outer grid is designed to protect you from unintentionally touching the inner high voltage grid. Try hitting insects with the grid. The voltage will kill them as soon as they touch the inner grid. To remove dead insects, shake or brush the unit. Remove the batteries before cleaning it with water. Make sure the device is absolutely dry before taking it into operation again.

Also available with plastic-free packaging (Art. No. 251540F).

Additional information

- **Dimensions:** 18 x 45 x 3 cm (W x H x D)
- **Packaging dimensions:** 21.5 x 51.5 x 3 cm (W x H x D)
- **Manuals included:** DE, GB, FR, ES, IT, NL, PT
- **Product images, scenery images**
- **Packaging unit:** 50 units per package
