Bait Box

Catch mice and rats hygienically with bait or a snap trap in a box

Mice and rats in the garden, in the garage or in the house are unwelcome guests and should be eliminated as quickly and early as possible to avoid a larger population breeding in the vicinity. If no action is taken in the beginning, getting rid of a large population can become a costly task and makes the environment quite unhygienic. When using poison bait or traps, it is extremely important to make sure that children and pets are not harmed in any way and that the rodents do not become a health hazard. The lockable Bait Box from Gardigo makes catching mice and rats safer. The Bait Box can be set up with poison or a mouse trap (not included), protecting the environment from these potentially dangerous objects, but at the same time allowing rodents access. In order to prevent inquisitive children from opening the box, it can be locked with a key. The opening is large enough to let a mouse or rat into the box and when the animal is caught in-

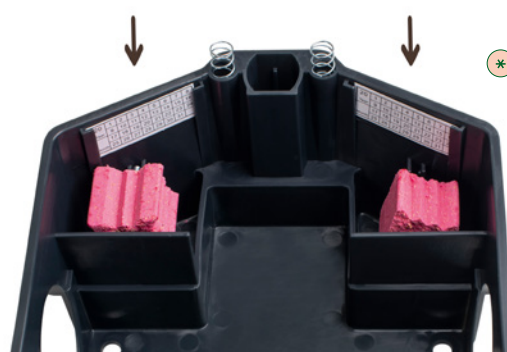

side, it will perish there and can be disposed of very hygienically.

Application: Open the lid of the bait box by inserting the supplied key into the keyhole and turning it. The box will open automatically. On the left and right you will see compartments in which bait or poison can be placed. The dimensions of the box also allow the placement of a mouse trap as large as 11.5 x 5 cm, set up with a delicious bait. Place the bait box on the path of the rat or mouse, preferably along a wall. Both openings should be facing opposite directions along the path. Please follow the instructions carefully when using poison bait or snap traps.

*Bait and traps are not included.

Document when the bait box is checked

Additional information

- **Dimensions:** 18 x 8.2 x 16.2 cm (W x H x D)
- **Manuals included:** DE
- **Product video, product images, scenery images**
- **Packaging unit:** 30 units per package
