Bait Station Metal

For rodent poison bait

Problems with rats require rapid and determined action, as there is a high risk of contamination with infectious diseases.

Rats are very cautious and hard to lure into a trap. Poison baits containing rodenticides with a delayed action are considered to be the most effective rat control measure. Because of their toxicity, these must not lie about unprotected.

The Gardigo Bait Station Metal is designed exactly for this purpose.

The bait station can be locked with a hex screw, so that children and pets cannot reach the bait so easily. The narrowed entrance holes make it difficult to reach into the trap. Ordinary bait stations have larger holes. The rat can still easily reach the bait inside the Gardigo trap, as the entrance holes are still as high as the opening above the bait compartment inside the trap.

This special construction allows us to make a shorter trap. This makes it easier to find a suitable place for the trap and it can easily be hidden. In case of a rat problem, discretion and subtlety is often required.

The trap has holes in its side so it can be fixed to a wall. The Gardigo Bait Station Metal is sturdy and made of 1mm gauge galvanized sheet steel. This allows it to be used over a long period of time – perfect for long term rodent monitoring.

The Bait Station Metal is Made in Germany, in a sheltered workshop. By buying this product, you are supporting an important social institution.

Additional information

- **Dimensions:** approx. 43 x 7.5 x 7.7 cm (W x H x D)
- **Product video, product images, scenery images**
- **Packaging unit:** 1 unit
