Mole Repellent Basic

Moles during winter?

Using the Gardigo Mole Repellent Basic, mole control is possible even in winter. The device helps fending off moles and voles and keeping them away from your property on a long term basis. Just stick the Gardigo Mole Repellent Basic into the soil. It emits a vibration into the surrounding ground, which moles and voles find most irritating. The vibrations occur every 40 seconds in a changing frequency range between 400 and 1000 Hz. Quieter

areas will appear more pleasant to the animals. As the unpleasant tone persists, most moles and voles will search for a new home.

The distribution of the sound waves depends very much on the type of soil and it may take a little time, sometimes even weeks, before the mole decides to move from its location. Therefore the device should be kept on permanently in order to achieve a maximum of irritation.

The device is designed with the dark time of the year in mind and therefore battery operated. The battery pack cylinder makes changing the batteries easy. Pulling the repellent out of the soil is not necessary.

Additional information

- **Dimensions:** 7 x 29.5 x 5 cm (W x H x D)
- **Packaging dimensions:** 7 x 30 x 6 cm (W x H x D)
- **Manuals included:** DE, GB, FR, ES, IT, NL
- **Product video, product images, scenery images**
- **Packaging unit:** 10 units per package

Specifications

- **Covered area:** approx. 700 m², depending on soil conditions
- **Frequency:** 400 – 1000 Hz
- **Interval switching:** 2 sec. on/40 sec. off
- **Battery:** 3 x D batteries (not included)
- **Material:** ABS
