Vole Trap, Set of 3

Re-usable

Voles spend most of their lives in underground tunnels. This is where the Gardigo Vole Trap is used, as it is designed to be set into a tunnel. As voles have a high reproduction rate they can quickly become a plague. If you would like to save your vegetables, fruit trees and lawn from destruction, vole control is necessary. To set the Gardigo Vole trap into a tunnel, you first need to find it by using a probe (for example a metal rod). Vole tunnels are often just below the lawn surface. Now you can dig a hole (we recommend using a bulb planter tool for this) into which the trap is set. The gap between the trap and the soil should be sealed with leaves. Tension the trap by pulling the

handle upwards. Once a vole touches the trigger pin, the trap catches it. You can tell from the position of the tensioning handle if the trap has triggered without needing to pull it out of the ground.

Additional information

- **Dimensions:** 6.1 x 24 x 6.1 cm (W x H x D)
- **Packaging dimensions:** 18.3 x 19 x 6.3 cm (W x H x D)
- **Manuals included:** DE, GB, FR, ES, IT, NL, PT
- **Product images, scenery images**
- **Packaging unit:** 10 units per package
