Combi-Protection

Mosquito control without the use of chemical agents

If you want to avoid mosquito bites you need to take preventive action. Use the mosquito repellent plug Combi-Protection! The Gardigo Combi-Protection emits an ultrasonic signal which is comparable to the wing beat sound of male mosquitoes. Once a female mosquito has been fertilized she needs blood to develop her eggs. She will also avoid all male mosquitoes which she identifies by the frequency emitted by the beating of their wings. As the Combi-Protection is continuously sending out tones exactly this frequency, the female will try to leave the area as quickly as possible. This can spare you bites and itchy swellings.

As the Combi-Protection has an integrated Euro socket, the use of the device will not occupy your mains socket. You may still power another device. Leave the poisonous chemical repellents in the cupboard and protect your environment. The Combi-Protection is ready to use right out of the box, is a clean and economical helper and causes no additional costs for refilling.

Additional information

- **Dimensions:** 5 x 7 x 7 cm (W x H x D)
- **Packaging dimensions:** 7.5 x 15 x 7 cm (W x H x D)
- **Manuals included:** DE, GB, FR, ES, IT, GR, NL, RO
- **Product images, scenery images**
- **Packaging unit:** 40 units/package, 10 units/package

Specifications

- **Covered area:** approx. 30 m²
- **Frequency:** up to 7 kHz
- **Protection class:** II
- **Connected load:** 2.5 A
- **Voltage:** 230 V/50 Hz
- **Current consumption:** approx. 1.2 W
- **Operating display (LED)**
