

Art.-No. 90581

Feeding Station for Birds

Easy to fill

The Gardigo Feeding Station made of natural wood and blends perfectly into its surrounding environment and is unobtrusive. The wooden log is hollowed out. Its front is covered with a wire mesh. On the back there is a covered opening for filling the bird feeder. The Feeding Station has a sturdy cord to hang it as desired.

Using the bird feeder, sparrows, robins, finches, bullfinches and other birds can be attracted. In order to observe your feathered friends, simply fill a mixed selection of grains into the feeding station. It should be noted that the feeder should be hung be-

fore the first snowfall, so that the birds can find the fodder and remain faithful to the feeding ground.

Use:

Through the opening in the back, you can fill in the bird seed. Here you will find an opening covered with a wooden lid. Open the cover to fill the station.

Please note: Only feed birds when they have no other way of getting food. With the first signs of spring you should stop feeding.

Additional information

- **Dimensions:** approx. 8 x 20 x 8 cm (W x H x D)
- **Product images, scenery images**
- **Packaging unit:** 36 units per package
