Insect Hotel

High quality – made to last

Premium

Sustainable

With this product, we rely entirely on high-quality, durable materials for maximum sustainability. The body and nesting beams are made of European oak. This makes the insect hotel extremely durable and long lasting.

The hard hardwood allows for cleaner drill holes than softwood. Solitary bees accept them better than nesting tubes in softwood.

Bamboo is also used as a natural nesting tube. Thanks to the naturally varying tube diameters, many different bee species will find ideal nesting conditions here.

Climate-friendly

The robinia wood from which the roof and posts are made is particularly weather-resistant. The wood grows in Europe and is considered an ecologically sensible alternative to tropical wood because of its hardness and durability. Due to the short transport routes of the European timber, we can keep the carbon footprint small.

Social responsibility

You also take on social responsibility with the insect hotel Premium. The body is made in a workshop for people with disabilities. By buying this product, you support an institution in which they can learn a trade and participate in working life.

Every square metre counts!
Sponsor 1m² of a flowering meadow for one year by buying this product!

The Insect Hotel Premium is delivered disassembled on a pallet.

Your customized Insect Hotel

Our Insect Hotel Premium is a professional and high-quality nesting aid, designed with the use in public areas in mind. Ideal for **cities, communities and companies**. Let us customize it for you with your own logo or coat of arms!

Show everyone that you have read the signs of the times and care about biodiversity.
